Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A method for media indexing comprising:

capturing a subject in a media file with a media capture device;

automatically receiving index information from an external source related to the subject; and

associating the index information with the media file.

Claim 2 (previously presented):   The method of claim 1 wherein the step of associating the index information with the media file further comprises:

encoding the index information into the media file.

Claim 3 (previously presented):   The method of claim 1 further comprising:

providing the media file and the index information to a media file storage device which comprises a plurality of stored media files having index information associated therewith; and

storing the media file along with the plurality of stored media files;

Claim 4 (previously presented):   The method of claim 3 wherein the media file storage device stores the media file and index information, the method further comprising at least one of the following:

searching the plurality of stored media files using the index information and enabling a commercial system with the plurality of stored media files using the index information.

2

Claim 5 (previously presented): The method of claim 1 wherein the index information, prior to being associated with the media file, is transmitted from a media indexing beacon.

Claim 6 (previously presented): The method of claim 5 wherein the step of receiving the index information is in response to an index information request.

Claim 7 (previously presented): The method of claim 1 wherein the index information comprises at least one of the following: a time indicator, a landmark indicator, an event indicator, a global positioning system indicator, commercial information, a universal resource locator, and a proximity indicator.

Claim 8 (currently amended): A method for media indexing comprising:

storing index information relating to a subject;

receiving an index information request that is generated by a media capture device; and

transmitting the index information relating to ~~a~~the subject to the media capture device in response to receiving the index information request.

Claim 9 (Canceled)

Claim 10 (previously presented): The method of claim 8 wherein the media capture device receives the index information and associates the index information with a media file.

3

Claim 11 (previously presented):   The method of claim 8 wherein the index information is wirelessly transmitted to the media capture device.

Claim 12 (previously presented):   The method of claim 8 wherein the index information comprises at least one of the following: a time indicator, a landmark indicator, an event indicator, a global positioning system indicator, commercial information, a universal resource locator and a proximity indicator.

Claim 13 (previously presented):   A method for media indexing comprising:

capturing a subject in a media file with a media capture device;

providing index information from a media indexing beacon to the media capture device, wherein the index information relates to the subject in the media file; and

associating the index information with the media file.

Claim 14 (previously presented):   The method of claim 13, prior to providing index information from the media indexing beacon, further comprising

detecting a user input to capture the media file; and

providing an index information request to the media indexing beacon.

Claim 15 (previously presented):   The method of claim 13 further comprising:

providing the media file having the index information associated therewith to a media file storage device.

Claim 16 (previously presented): The method of claim 15 wherein the media file storage device comprises a plurality of stored media files having index information associated therewith, the method further comprising:

searching the plurality of stored media files using the index information.

Claim 17 (previously presented): The method of claim 13 wherein the index information comprises at least one of the following: a time indicator, a landmark indicator, an event indicator, a global positioning system indicator, commercial information, a universal resource locator and a proximity indicator.

Claim 18 (previously presented): The method of claim 17 wherein the index information enables a media file to be utilized by at least one commercial system, wherein the at least one commercial system comprises at least one of the following:

a workflow system, a procurement system, a retail sales system, and a safety inspection/auditing system.

Claim 19 (previously presented): A media capture and indexing system comprising:

a media indexing beacon which generates a beacon signal containing index information relating to a subject; and

a media capture device that captures the subject in a media file and receives the beacon signal from the beacon and associates the index information with the media file.

5

Claim 20 (previously presented):   The media capture and indexing system of claim 19 wherein the media capture device captures a plurality of media files each having index information associated therewith, the system further comprising:

a media file storage device that receives the plurality of media files, wherein the plurality of media files may be indexed based on the index information.

Claim 21(previously presented):   The media capture and indexing system of claim 19 wherein the media indexing beacon further comprises:

at least one index buffer comprising the index information; and

a transmitter operably coupled to the at least one index buffer, wherein the transmitter provides the index information to the media capture device.

Claim 22 (previously presented):   The media capture and indexing system of claim 21 wherein the media indexing beacon further comprises a receiver that receives an index information request from the media capture device, wherein the transmitter transmits the index information in response to the index information request.

Claim 23 (previously presented):   The media capture and indexing system of claim 19 wherein the media capture device further comprises:

a media input module which generates the media file in response to a media file generation request;

a processor operably coupled to the media input module to receive the media file; and

6

an index information receiver operably coupled to the processor, wherein the index information receiver receives the beacon signal and provides the index information to the processor, wherein the processor associates the index information with the media file.

Claim 24 (previously presented):   The media capture and indexing system of claim 23 wherein the index information receiver further contains a transmitter that transmits an index information request to the media indexing beacon.

Claim 25 (currently amended):   An apparatus for media indexing comprising:

means for storing index information relating to a subject;

means for transmitting a beacon signal wherein the beacon signal comprises index information relating to the subject; and

a media capture device that captures the subject in a media file, wherein the media capture device receives the index information from the beacon signal and associates the index information with the media file.

Claim 26 (canceled):

Claim 27 (previously presented):   An apparatus for media indexing comprising:

means for capturing a subject in a media file;

means for receiving index information related to the subject; and

means for associating the index information with the media file.

Claim 28 (previously presented):   The apparatus for media indexing of claim 27 further comprising:

a media indexing beacon that provides a media indexing beacon containing the index information to the means for receiving.

Claim 29 (currently amended):   A computer readable medium having stored thereon:

a media file of a subject; and index information, associated with the media file, wherein the media file and index information are stored on the medium at substantially the same time; and

wherein the media file is captured by a media capture device and the index information is transmitted by a media indexing beacon.

Claim 30 (canceled)

Claim 31 (canceled)
